#### **DETAILED ACTION**

## Second supplemental restriction.

This restriction is issued because claims 2-223 were canceled in the transmittal form which was previously overlooked by the examiner.

Claims 224-292 are pending and subject to restriction.

### Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 224-267, drawn to a first method, a method of maintaining viability of an organ comprising perfusing with a first fluid, perfusing with a second fluid containing no  $O_2$ , classified in class 435, subclass 1.1 and others.
- II. Claims 268-270, drawn to a second method, a method of maintaining viability of an organ comprising perfusing with a fluid while utilizing a pressure sensor, classified in class 435, subclass 1.1 and others.
- III. Claim 271, drawn to a third method, a method of maintaining viability of an organ comprising perfusing with a first fluid containing  $O_2$ , perfusing with a second fluid while utilizing a pressure sensor, classified in class 435, subclass 1.1 and others.
- IV. Claims 272-274, drawn to a fourth method, a method of perfusing an organ comprising perfusing with a fluid while utilizing a variable valve, classified in class 435, subclass 1.1 and others.
- V. Claims 275-292, drawn to a fifth method, a method of transporting and storing an organ, classified in class 435, subclass 1.1 and others.

The inventions are distinct, each from the other because of the following reasons:

Application/Control Number: 09/162128 Page 3

Art Unit: 1651

The processes are distinct from one another because they recite different and distinct steps and require different and distinct elements in the performance of the methods. For example, two distinct fluids are perfused in Group I, while Groups II, IV do not require two fluids. The variable valve required in Group IV is not required in the methods of Groups I, II, III, V, etc..

The several inventions listed above are independent and distinct from one another as they have acquired a separate status in the art and require independent searches, particularly with regard to the literature searches. Clearly, a reference which would anticipate one of the above groups would not necessarily anticipate or even make obvious any of the others.

An undue burden would ensue from the examination of multiple methods which have distinct steps and end points. Burden lies not only in the search of US Patents, but in the search for literature and foreign patents and examination of the claim language and specification for compliance with the statutes concerning new matter, distinctness and scope of enablement.

Because these inventions are distinct for the reasons given above restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).

To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Group Art Unit 1651. The supervisor for 1651 is M. Wityshyn, (703) 308-4743. The normal work schedule for Examiner Saucier is 8:30AM to 5:00 PM Monday and Tuesday and 8:30 to noon on Wednesday.
